

1. Post accepts a body

```
{
  "Id": integer,
  "text": string,
  "date": string
},
```
2. Get returns an array of objects
3. <https://practiceapi.devmountain.com/api/posts?id=555>
4. 200, 409
5. <https://practiceapi.devmountain.com/api/posts/>

```
{
  "text": "Harrison"
}
```
6. <https://practiceapi.devmountain.com/api/posts?id=1722>

```
{
  "text": "Yellow"
}
```
7. <https://practiceapi.devmountain.com/api/posts/filter?text=blue>
8. Content type is: application/json; charset=utf-8
9. Request was missing req.query.id or req.body.text
10. You get what you would get without a query. I think this is because the query is separate from the body so it is not recognized if there is no input for a query
